

I urge you to reject the National Association of Broadcaster's petition 04-160. As an XM user, I feel it is important that XM has the ability to provide the information, such as traffic and weather, that its customers request. Weather and Traffic are not the sole domain of NAB! Like many other XM customers, I use the service because I travel frequently. I want a service that I can use no matter where I am in the country. I pay a premium for the ability to access this programming throughout the country. I ask you to reject this petition because "locally oriented" criteria is too vague. Why should I be denied the right access this information because I elect not to use one of the NAB's associates.

Thank you.
